Chattogram, Bangladesh

Summary

Full-Stack AI Engineer — 3+ years building scalable real-time systems and secure multi-tenant backends. Skilled in TypeScript, Postgres RLS, WebRTC, AI-powered features, Next.js, and AWS. Designed and shipped horizontally scalable RTC and HLS pipelines, improved backend throughput 45%, and supported 3k+ concurrent users with median latency <200ms (validated via load tests)

Work Experience

- **Full-Stack AI Engineer, MeshEver | Chattogram | Jan 2026 – Present**
  - Building Zasmate, a multi-tenant AI SaaS that answers customers for businesses across 7 channels (WhatsApp, Messenger, Instagram, web chat, email, Telegram, SMS) in Bangla, Banglish and English.
  - Enforced tenant isolation with PostgreSQL RLS: tenant-scoped transactions under a restricted role, and a startup check that fails if the connection can bypass RLS.
  - Built the RAG agent (pgvector plus keyword search) over each vendor's catalogue. It hands off to a person when confidence is low and holds replies for approval when retrieval fails. Integrated Meta's Graph API webhooks for messages and comment replies.

- **Full-Stack Developer, 3Zero Digital | Chattogram | Jan 2025 – Dec 2025**
  - Raised backend throughput 45% and cut latency 50% with a worker-pool architecture and batched writes. Deployed agentic RAG on MCP servers that cut support tickets ~25%.

- **Freelance Full-Stack Engineer | Remote | Mar 2023 – Dec 2024:**
  - Full Stack Projects, Secure backends, real-time APIs and performance tuning for client systems.

Selected PROJECTS

- **Social Match-Making Video Chat Reels (Monorepo)..... Live Link | Code**
  - Engineered a horizontally scalable RTC system with WebRTC, NATS, Socket.io, and Redis; integrated a NATS–PostgreSQL pipeline achieving sub-100ms message acknowledgment.
  - Architected an AWS ECS + FFmpeg HLS pipeline for seamless video streaming; leveraged Neo4j graph database to power relationship-based discovery and matching.
  - Implemented JWT session authentication and Redis-backed rate limiting; optimized performance with batched DB writes and integrated OpenAI SDK chatbot.

- **Multi-Vendor E-Commerce (Monolithic)..... Live Link | Code**
  - Built a secure Next.js 16 platform using Drizzle ORM and PostgreSQL RLS to ensure strict multi-tenant data isolation at the database level.
  - Guaranteed data integrity by implementing Database Transactions for atomic order processing, inventory sync, and secure Cryptomus crypto payments.
  - Engineered separate Dashboards for vendors, admin with ABAC (CASL), real-time delivery tracking and multi-channel notifications, improving efficiency by 20%.

Core SKILLS

Languages & Frameworks: TypeScript, Python, Next.js, React-Native, NestJS, Fastify, GraphQL.
Data & DB: PostgreSQL (RLS), Drizzle ORM, Redis, MongoDB, Neo4j, Qdrant.
Infra & Messaging: Docker, AWS (VPC, ECS, EC2, Lambda, SNS, SQS, S3, CloudFront, Bedrock), Terraform, NATS, RabbitMQ, NGINX, Cloudflare (Domain, R2, Workers, CDN, AI).
Auth & Security: JWT/JWKS, OAuth, RBAC, ABAC, Zod, CASL, Passport.js, BetterAuth.
Realtime & Streaming: WebRTC, Socket.io, HLS, FFmpeg.
AI / Tools: Agentic RAG, MCP Servers, A2A, LangGraph, n8n, OpenAI SDK.
DevOps / Observability: Linux, GitHub Actions, Prometheus/CloudWatch, Structured Logging, CI/CD.
Methodologies: Event-Driven Architecture, SOLID, KISS, Agile.

EDUCATION

- **Master of Science in Computer Science & Engineering,** International Islamic University Chittagong — 2026
  - **Thesis:** Leakage-Aware Multi-Class Detection of AI-Generated Phishing Emails Using Stylometric Features and Stacked Ensemble Learning.
- **Bachelor of Science in Computer Science & Engineering,** Port City International University — 2023
  - **Thesis:** Gender Predictions of Bengali Names: An Ensemble and BERT-based Approach.
